ABOUT ME

I am Vanja Sukurma, a dedicated frontend developer with over 2 years of professional experience. In my free time, I am passionate about expanding my skills in backend development and staying updated on the latest programming trends.

Beyond my professional interests, I am a guitarist and an avid animal lover. I highly value teamwork and effective communication, striving to continuously improve my skills and knowledge. My goal is to achieve excellence in my field while fostering strong, collaborative relationships within my team.

DIGITAL SKILLS

JavaScript / React / Github / TypeScript / Git / Next.js / BootstrapCSS, TailwindCSS / CSS / HTML / Material Design - Material UI / shadCN / Redux

PROJECTS

[2023 – Current]

Private project Technologies:

- Frontend:
 - Next.js 13,
 - Typescript,
 - Zod/React-hook-form (data validation),
 - Axios (HTTP Client),
 - Redux

Description:

Real project consisting of 3 applications for a client from wood processing industry. It's a dynamic web app in which client gets an opportunity to assemble its own kitchen/closet elements.

1. application #1 - user can assemble entire closet based on certain parameters. There is also a visual representation of chosen elements following the progress in application. At the end the table is rendered with prices and complex calculations needed for a final price of the created elements. By clicking on a button user sends this order to production.
2. application #2 - same as above but difference is this application is for kitchen elements,
3. CMS - User/employee can take an order that has been forwarded from the earlier mentioned apps and start working on them. Upon finishing the order the app shows certain visuals indicating if the order is finished, what's the current stage of order and so on. **Admin** role has the possibility of creating certain elements that client can use inside app #1 and app #2.

[2024 – Current]

Personal Book Library Technologies:

- Frontend:
 - Next.js 14,
 - Typescript,
 - Zod/React-hook-form (data validation),
 - Axios (HTTP Client)
- Backend:
 - Nest.js,
 - Typescript,
 - MongoDB,
 - jwt

Description:

Created login/register functionality. When logged, user can store data about the books. (CRUD operations)
